Professional Summary

Entry-level DevOps candidate and 2026 Software Engineering graduate with hands-on, project-based experience in containerization, Infrastructure as Code, configuration management, and CI/CD automation. Built and deployed full-stack applications on AWS EC2 using Docker, Docker Compose, Terraform, Ansible, Nginx, and GitHub Actions, including GitHub OIDC-based authentication to AWS. Software development background in React, Node.js, Express.js, and MongoDB. Holds Microsoft, AWS, and Pearson certifications. Seeking a Junior DevOps Engineer, Cloud Engineer, or DevOps Intern role.

Technical Skills

Cloud: Amazon Web Services (AWS), EC2, AWS Systems Manager, IAM, GitHub OIDC-based AWS authentication
Containers: Docker, Docker Compose, Docker Hub
Infrastructure as Code: Terraform
Configuration Management: Ansible
Operating Systems & Web Servers: Linux, Nginx
CI/CD & Version Control: Git, GitHub, GitHub Actions, CI/CD workflows
Programming & Backend: JavaScript, Node.js, Express.js, REST APIs
Frontend & Database: React, Vite, MongoDB

DevOps Projects

Todo DevOps Project

github.com/Ahmad-000/todos-devops-project

Technologies: AWS EC2, Terraform, Ansible, Docker, Docker Compose, GitHub Actions, AWS Systems Manager, GitHub OIDC, Nginx, React/Vite, Node.js/Express, MongoDB

- Built a containerized Todo application with a React/Vite frontend, Node.js/Express backend, and MongoDB database, orchestrated with Docker Compose.
- Configured Nginx to serve the frontend and proxy API requests to the backend.
- Provisioned AWS EC2 infrastructure and related resources using Terraform (Infrastructure as Code).
- Used Ansible to configure Docker on the server and deploy the application.
- Created a GitHub Actions CI/CD workflow covering validation, Docker image publishing, and deployment through AWS Systems Manager.
- Configured GitHub OIDC-based authentication so GitHub Actions can access AWS without long-lived AWS access keys.
- Tested and confirmed the deployed application's frontend-to-backend connection.

MERN DevOps Automation

github.com/Ahmad-000/mern-devops-automation

Technologies: Docker, Docker Compose, Docker Hub, GitHub Actions, AWS EC2, Node.js, Express.js, MongoDB, Vite, Nginx

- Containerized a MERN-style application using separate frontend and backend Docker images.
- Configured Docker Compose to run the frontend, backend, and MongoDB services together, with service connectivity and a MongoDB health check.
- Published frontend and backend images to Docker Hub.
- Used GitHub Actions to automate workflow checks and deployment steps.
- Deployed the application to an AWS EC2 instance and made it accessible over HTTP.

Certifications

- **Microsoft Certified: DevOps Engineer Expert** — Microsoft
- **Microsoft Certified: Azure Administrator Associate** — Microsoft
- **AWS Certified Solutions Architect – Associate** — Amazon Web Services (AWS)
- **Information Technology Specialist – JavaScript** — Pearson

Education

Bachelor of Science in Software Engineering 2026
COMSATS University Islamabad, Abbottabad Campus
